U.S. DEPARTMENT OF AGRICULTURE - Forest Service

THE ANNUAL FIRE REPORT FOR THE NATIONAL FORESTS IS A COMPILATION OF STATISTICS FOR ALL FOREST FIRES OCCURRING ON NATIONAL FOREST LAND AND OTHER LANDS PROTECTED BY THE FOREST SERVICE.

Table 1. Number of Fires by General Causes

Table 2. Area Burned by General Causes

Table 3. Area Burned and Tangible Damage

Table 4. Tangible Damage by Major Causes

Table 5. Number of Fires by Major Causes and Size Class

Death of a Forest -- a night view of the 4th of July Mountain Fire, Wenatchee N. F., Washington. From August 4 through 7, 1968, this fire spread over more than 27,000 acres of forest and range land causing damages in excess of $1 1/2 million. More than a thousand men were mobilized before the blaze could be controlled.

FIRE SEASON HAS WIDE CONTRASTS

The 1968 fire season in the National Forest was marked by wide contrasts in weather severity and wildfire activity. While the year lacked the dramatic aspects of the 1967 Western fire crisis, many areas were subjected to a very serious fire threat for at least a portion of the season.

Protection forces responded to peak burning periods with stepped-up fire prevention programs and increased preparedness for rapid detection and attack. But time and again, weather, topography, dry fuels, and lightning or man's carelessness combined to result in fires that defied all efforts for quick control.

With local attack forces often hard-pressed to handle the situation in the face of severe burning conditions, swift reinforcement by well trained personnel on a planned basis was the key to holding down losses. Forest Service suppression crews, Job Corps members, experienced supervisory personnel, as well as trained crews from cooperating agencies were called to trouble spots to assist in controlling large fires and to help keep smaller ones from reaching major proportions.

To keep pace with expanding fire protection requirements, the Forest Service has put increased emphasis on developing optimum competence in its fire control personnel to assure the most efficient fire control action. During the year, some 70 top supervisory fire personnel received special training in a national Advanced Fire Managemen training course; local training sessions helped thousands of other personnel to become better prepared to fulfill their responsibilities should a fire emergency arise. To aid this training effort, the Forest Service has pioneered in the development of several training aids, the most recent of which is a low-cost, portable fire simulator. Fire simulation enables personnel to be given training in fire strategy under seemingly realistic conditions. The new units will make it possible for greater numbers of fire control people to benefit from this type of training.

FIRE WEATHER

Severe in the West...

For the second consecutive year, Southwestern Forests saw severe burning conditions developed by May; in June these spread into southern California and the central Rockies. July rains eased problems in Arizona, New Mexico, and Colorado, but other Western areas continued to be dominated by warm, dry conditions that threatened to approach those which produced the 1967 fire crisis. It was with much relief that

firefighters welcomed an abrupt reversal of the weather trend, as a series of substantial rainstorms moved across the area after mid-August.

The changing patterns elsewhere brought little relief to the very dry southern California brushlands and a potentially serious fire situation continued there into early 1969.

...In the East, Nearer Normal

Both spring and fall fire seasons on the National Forests east of the Mississippi saw generally near-normal fire weather prevail. A notable exception was in the extreme southeast where drought conditions carried over from 1967. The threat of a very severe fall season there was finally cut short by heavy rains from hurricane Gladys in mid-October.

FIRE ACTIVITY

Number of Fires Down...

Much-reduced lightning storm activity in the West coupled with increased moisture with later season storms produced, in 1968, a sharp reduction in lightning fires to the lowest number since 1964, and the second lowest since 1965.

The number of man-caused fires was near or slightly below average in most regions, and the total reflects the second year of a favorable trend despite dry conditions and increasing forest use. Only California showed a marked increase in man-caused fires in 1968. This could be

attributed to the abnormally long fire season there, rather than to an increase in the incidence of carelessness.

While many factors influence the rate of man-caused fire occurrence, the continuing fire prevention program must be given credit when the present favorable trend in the numbers of man-caused fires is appraised.

...But Acres Burned Increased

Despite the drop in number of fires, the area under National Forest protection burned in 1968 rose slightly above that burned in 1967, to 16 percent above the previous 5-year average. Nearly one-half of this loss was accounted for by four Western fires that occurred during very critical conditions which made early control impossible. Largest of these was the 50,000-acre Liebre fire on the Angeles National Forest and adjacent lands in California; the other three each burned from 15,400 to 27,100 acres under National Forest protection. All but one of the four largest fires were man-caused.

In all, 75 fires escaped to burn areas in excess of 300 acres despite control efforts. This was 7.7 percent of the total fires, and reflects an improvement over both the previous year, when the figure was 7.9 percent, and 1966, when 9.8 percent of the fires grew beyond 300 acres.

AIRCRAFT CONTRIBUTION SUBSTANTIAL

Aircraft continue to play an important and effective role in the modern fire control effort. Air tankers and helitankers were used on a greater proportion of the fires than ever before -- nearly 21 percent. This reflects the increasing reliance on airtankers for initial attack where they have proven to be most effective, especially during high fire danger periods.

Helicopters continue to be utilized for more and more fire jobs, where their versatility makes them highly efficient for personnel and supply transportation, scouting, and application of retardants. In fact, helicopters now account for nearly 25 percent of the total aircraft flight hours for fire control activities.

TOTAL FIRES AND ACRES BURNED - NATIONAL FOREST PROTECTION

Calendar Year	Number of Fires			Acres Burned
